

## MIDSTREAM TRANSPORTATION

# Optimize Your Pipelines With Smart, Automated Data Processing

W Energy's Transportation Module streamlines your pipeline operations for gas and liquids, integrating critical points, contracts, and data handling for faster processing and transparency with large-scale data and invoicing.

“

It's not just about pipeline management; it's about unlocking new levels of performance and transparency in transportation.

## The W Energy Midstream Transportation Advantage

### Rapid Data Processing

Allows you to process large amounts of transportation data in record time, enabling quick and accurate operational decisions.

### Advanced Allocation Methods

An advanced allocation framework, streamlining the distribution process and accuracy of volume assignments amongst your team's stakeholders.

### Manage Every Aspect of Midstream Transportation

Provides a comprehensive solution for managing pipeline operations, from data entry to invoicing, for more efficiency across the transportation workflow.

# Key Features: Midstream Transportation

## Easy Allocations with Dependencies

Allows for automatic and complex volume allocations across different shippers and contracts

## User-Friendly Data Grids

Offers an Excel-like interface for easy data review and analysis

## Flexible Fee Structures

Utilizes formulas for creating adaptable and precise fee calculations

## Shipper Portal

Enables shippers to view and manage their nomination data and inventory in real time

## Tariff Management

Handles complex pricing structures easily, accommodating volume commitments and pricing tiers

## Excel-like Functionality in UI

Allows for sorting, filtering, and customizing data layouts, making analysis intuitive and efficient

## Automated Process Scheduling

Sets up processes to run automatically at regular intervals, ensuring timely data management

## Quick Processing Time

Processes large dataset, from data preparation through to accounting, in seconds

## Trusted by Leading Brands
