

DATAVIEW

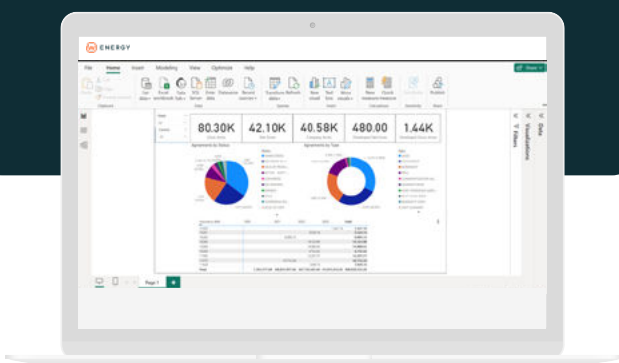

Unlock Your Data: Expert-Level Analytics Made Easy

For upstream and midstream companies, DataView simplifies the process of accessing, normalizing, and utilizing your data without needing extensive technical skills in data analytics. DataView integrates with tools like Power BI, SpotFire, Tableau, and supports general data lake initiatives, allowing businesses to create reports and operationalize their analytics with ease.

“

It's not just the technology, it's the actionable insights and user-friendly experience that set DataView apart from other tools.

The DataView™ Advantage

Instant Analytics Without Experts

DataView enables immediate, expert-level analytics without the need for data specialists. By simplifying data complexity with an intuitive interface, DataView makes advanced analytics accessible to everyone.

Instant Birds Eye View of Your Business

DataView provides a complete near real-time overview of your operations by integrating data from multiple sources into a clear, comprehensive dashboard.

Seamless Data Integration and Collaboration

Easily integrate multiple data sources together into one platform and view, to help create productive collaboration and consistent analysis across your teams.

Key Features: DataView™

User-Friendly Interface

Simplifies complex data, making advanced analytics accessible to users without extensive technical knowledge

Near Real-Time Data Integration

Aggregates data from multiple sources, providing a comprehensive and up-to-date view of business operations

Support for Multiple Analytics Tools

Offers flexibility in data analysis and reporting; compatible with leading analytics platforms like PowerBI, Tableau, and Spotfire

Automated Data Normalization

Rationalizes data tables, making them more business-friendly and easier to utilize

Customizable Dashboards

Easily creates and modifies dashboards to focus on the key metrics and data that matter most to your business

Faster Data Processing

Normalizes data tables so less time is spent querying large, complex datasets

Scheduled Reporting and Alerts

Automates report generation and notifications based on predefined criteria, ensuring timely insights and responses to business conditions.
