

W Energy for Land

Simplify data management, ensure compliance, and manage lease obligations more easily and effectively

Land management executives and their teams must manage the big picture – steering the overall strategy of the organization’s drilling program – with very fine-tuned details, like lease agreement obligations, managing chain of title, and regulatory and compliance demands. These responsibilities differ in their altitude, but require a similar approach. To successfully run a land program, leaders must have crystal-clear visibility into, and full control of, their data.

The W Energy land platform delivers exactly that. With W Energy, Land teams gain the insight they need to make smart, informed decisions about drilling locations and asset acquisition. Our comprehensive set of capabilities streamlines compliance with lease obligations and regulatory requirements, minimizes potential losses, and enables meticulous reporting. The W Energy platform empowers Land executives to run their departments their way, with a complete view of both the forest and the trees.

For Land teams, the stakes are too high for manual processes

The W Energy software platform is purpose-built to solve the challenges facing upstream and mid-stream oil and gas companies. We offer an industry-leading solution because we deeply understand the issues that Land teams must address.

Our customers have shared that their toughest roadblocks include:

Data complexity. The sheer amount of data, from contracts to participations to geology, can quickly become overwhelming and unwieldy – especially when you’re trying to do more with less.

Regulatory and compliance. Regulatory requirements are both complex and always changing. Land teams must not only keep pace with federal mandates, but understand and comply with state and local regulations as well.

Resource allocation. Deciding where to drill and which assets to acquire requires complicated analysis of geological data, market conditions, competitor lease holds, and financial resources – a dynamic process that’s further complicated by Land and Finance departments operating in their own silos.

Lease agreements and participations. Every lease agreement is unique, with its own specific obligations and schedules. Keeping track of what is due, when, to whom is incredibly difficult to do manually, and missed obligations can result in legal consequences or loss of the lease.

Legacy systems and processes. Missed obligations often occur because Land teams aren’t equipped with the right tools for the job. Spreadsheets and clunky, outdated software increase the risk of errors and make it hard to meet deadlines.

Acreage reporting. Land teams struggle with accurate acreage reporting due to the number of owners in a unit and the field rules in the area. Incorrect calculations can significantly hinder strategic decision making.

While some of these challenges aren’t going to change – there is no way lease agreements are going to get less complex – they can be addressed with the right technology partner. W Energy gives you cutting-edge capabilities, relentless focus on innovation, and complete commitment to oil and gas that you need to modernize and streamline processes in your Land department.

Transform Land processes with clear, accurate, actionable data

At its core, the W Energy platform simplifies data management. It gives you the flexibility to manipulate data based on your business processes and preferences, then makes it easy to see and act on that data. The platform also connects Land, Revenue Distribution, and Finance for seamless collaboration, eliminating silos and giving leaders across the organizations the visibility and insight they need to make business-critical decisions.

What does this look like in practice?

| W Energy Capabilities: | Enabling Land teams to: | So the business can: |
|---|--|---|
| A single view into company and competitive leaseholds | Make strategic, informed decisions on drilling locations and asset acquisitions Easily see a comprehensive, up-to-date, visual representation of leaseholds through integrations with GIS mapping and external data sources Efficiently manage formations to understand what level of earth you own and optimize your drilling program | Grow more quickly and strategically Clearly understand the competitive landscape Ensure compliance with lease obligations and regulatory requirements |
| Powerful reporting with customizable acreage calculations | Calculate acreage easily and accurately in the way that works best for your business Automatically adjust calculations for a specific lease or piece of land Easily understand payment obligations by running obligations for any time period | Understand lease and land information more accurately and comprehensively Forecast payment obligations into the next quarter, year, etc. for better planning |

| W Energy Capabilities: | Enabling Land teams to: | So the business can: |
|---|--|--|
| <p>A clear, consolidated eCalendar for managing obligations</p> | <p>See every obligation from all of your leases in one easy-to-understand visual</p> <p>Improve the accuracy and timeliness of payment obligations and tasks</p> <p>Easily see upcoming lease expenses into the future</p> | <p>Maintain your assets by ensuring you don't miss any obligations</p> <p>Minimize potential asset losses, such as leases, wells, or drilling rights</p> <p>Improve asset management across the organization</p> |
| <p>Full integration between land data and financials</p> | <p>Reduce the risk of errors and improve the speed of processing by eliminating manual data transfers</p> <p>Collaborate and align between departments to better inform and execute your company's business strategy</p> <p>Manage participation more easily because revenue, finance, and division orders are fully connected</p> | <p>Reduce time and money spent correcting errors</p> <p>Operate more efficiently and cost-effectively</p> <p>Spend resource hours on more valuable work compared to manually wrangling data</p> |

With these capabilities, navigating the complexities of Land processes and responsibilities becomes less daunting, more efficient, and more accurate. As a result, your oil and gas organization can operate and grow with clarity and confidence.
