HighWire

The Power of HighWire and Stream+

Midstream oil and gas operators now have a modern alternative to legacy measurement systems. W Energy has partnered with Agile Midstream Products (AMP) to offer the industry's most advanced, cloud-native measurement solution. HighWire seamlessly integrates into W Energy's Stream+ platform to offer midstream operators an end-to-end measurement and accounting solution that improves data accuracy, operational efficiency, and financial clarity.

Why pair HighWire with Stream+?

Real-time data for enhanced accuracy

Automated measurement validation and loss detection

Seamless data integration into Stream+ for accounting and logistics

Minimizes revenue loss by identifying discrepancies faste

Fully cloud-native and scalable

No client installs or Citrix, accessible from any modern browser

Unlimited users and continuous, hassle-free updates

Scalable and auditable for regulatory compliance

Streamlined operations and faster close cycles

Eliminates manual data entry errors

Accelerates financial reporting and month-end close

Ensures cohesive integration between measurement and accounting

Seamless integration with Stream+

HighWire's real-time measurement data feeds directly into Stream+, enhancing key midstream functions.

Plant or pipeline accounting: Automated data flow reduces errors and improves reporting accuracy

DataView™ : Integrated business intelligence offers streamlined reporting of real-time data for reliable decision-making

Logistics and operations: Supports gathering, processing, transportation, and compliance

HighWire: Purpose-built for midstream operations

Unlike legacy systems, HighWire was designed for the cloud and offers unique advantages for midstream operators.

Designed separately for gas and liquids

Cloud solution with no Citrix or client installs and easy access from any modern browser

Continuous, customer-requested enhancements added at no additional costs and with no downtime

Integrated measurement and accounting eliminate manual data entry and errors

Scalable and secure to serve as a trusted, auditable source of measurement data
